AI 2 IMPROVE
FOREIGN LANGUAGE LEARNING

Co-funded by the European Union

INVITATION to participate in the piloting of the course in the Erasmus+ international project *AI 2 improve foreign language learning*

Generative AI is radically transforming language education. How will this affect the future learning?

In the **international Erasmus+ project**, **the HU** (Archimedes institute, English department) has developed, together with 7 partners from other European countries, the **blended learning course, which consists of 3 modules**. We have just finished the pre-trial phase in test bed schools; we are now working on revisions and in autumn we will start with the **piloting phase**.

You can visit the project web site here.

How can you participate?

Professional development in 2026-27

The course can serve you as a part of **your professional development**. By participating in the course [around 25-28 hours], you will also be able to provide **valuable feedback** and co-create the best way to integrate the content in our courses so that students can benefit from it. You will receive a certificate of attendance. You will also gain knowledge, experience and skills to efficiently use AI tools in your teaching.

Teacher-training module in 2027-28

Consequently, by participating in a course, you will be a part of a **teacher training module**. You won't spend extra time for it, but you will be provided will all materials for teaching, and you will also be able to teach the course/use the course content yourself.

Participation is free — this course is part of the European Erasmus+ project AI2ImproveFLL (https://ai2improve.eu/).

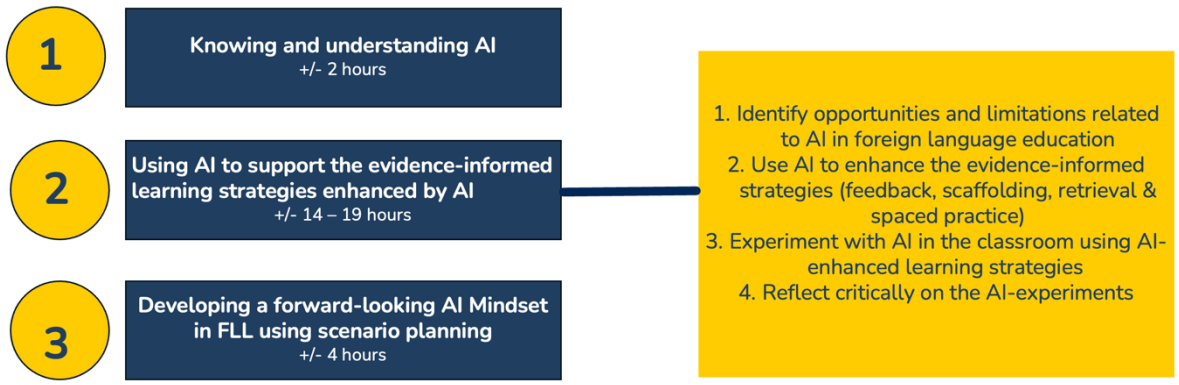
Certificates of attendance will be issued at the end of the courses.

Target audience?

Foreign language teachers, language teachers, students in (foreign) language teacher training programs, and teacher trainers.

What will you learn?

A blended 3-module programme: **online** learning on a digital platform combined with live sessions.



During this course

- you will explore the possibilities and limitations of AI in foreign language education,
- discover tools to integrate AI into your workflow as a teacher,
- you'll learn how AI can enhance feedback, spaced and retrieval practice, and scaffolding,
- you'll experiment reflect on the experience, provide feedback on how our students can benefit from it.

In practice?

The course takes **around 28 hours** (1 ECT) of commitment for participants (mostly working independently online, with shorter live sessions). Practically, this means 2 hours of engagement per week over 3 months, or alternatively, less hours over a longer period. We can adjust paste to your needs and availability. In the final session, we will discuss your feedback as well and the opportunities of how to use the course and/or materials in the future.

The project lead is Nives Kreuh Graveson, she will also provide for pilot courses the next academic year (2026-27), so please contact her.

Schedule

We are flexible in organising time. This is approximate time of engagement that is necessary, stretching over several months between **October-April** 2026/27.

		CONTENT
Kick off meeting	**Live/Teams** Time required: 1 hour	Introduction and information
Module 1	Independent **online** learning Time commitment: approx. 2 hours	Knowing and understanding AI
Module 2	Independent **online** learning Time commitment: approx. 5 hours	Identify opportunities and limitations related to AI in foreign language education
	Live session (workshop) Time commitment: approx. 6 hours	Use AI to enhance the evidence-informed strategies (feedback, scaffolding, retrieval & spaced practice)
	Experimenting with AI in the classroom (**at your own pace**) Time commitment: +/- 5 hours	Experiment with AI in the classroom using AI-enhanced learning strategies (**online buddy & tutor support**)
	Live session (workshop) Time commitment: 2 hours	Reflect critically on the AI-experiments Provide feedback
Module 3	**Online** learning Time commitment: approx. 1 hour	Developing a forward-looking AI mindset in FLL using scenario planning
	Live session Time commitment: 3 hours	AI-Forward Mind: Reimagining Language Education in the Age of Intelligent Systems **Workshop**
